

5

The image shows an orthographic projection of a 3D object. The object has a rectangular base with a semi-circular end. A vertical wall rises from the left side of the base. The top surface is slanted, rising from the right edge of the base to the top of the vertical wall. The object is shown from a perspective view, with a top view and a side view. The top view shows the semi-circular end and the slanted top surface. The side view shows the vertical wall and the slanted top surface. The object is labeled with the number 5.

An isometric view of a mechanical part. It features a rectangular base with a semi-circular cutout on the left side. A cylindrical protrusion is attached to the top surface of the base. On the right side of the base, there is a U-shaped cutout that goes through the entire thickness of the part. The part is shown within a transparent rectangular box to indicate its orientation.

The isometric view shows a mechanical part with a semi-circular base. The top surface is stepped, with a central rectangular section that is higher than the surrounding areas. The part is shown within a blue wireframe bounding box.

The image displays three orthographic projections of a mechanical part. The top view (left) shows a rectangular block with a semi-circular cutout on the right side. The front view (middle) shows a rectangular block with a semi-circular cutout on the right side. The side view (right) shows a rectangular block with a semi-circular cutout on the right side. The part is a rectangular block with a semi-circular cutout on the right side, viewed from three different angles.
